**EASY TO MAINTAIN, GOOD LOOKING, DURABLE, FIRE RESISTANT,
AND BETTER PRIVACY & SAFETY.**

When it comes to choosing a fence, we understand that it's not just how great the fence looks that matters -- but also how well it does its job, and how much time and effort it takes to ensure it stays up to the task.

EASY TO MAINTAIN.

We understand you want to choose a fence that is easy to maintain, so you're free to enjoy your weekends.

Fifty years of innovation in ColorMax steel ensures that there's no need to be spending your time painting, oiling, or maintaining your fence.

To ensure the maximum life and appearance from your ColorMax steel fence, we recommend you simply hose it down -- removing any debris -- at least every 6 months. It's that easy!

GOOD LOOKING.

With sleek lines and no exposed railings, ColorMax steel looks great on both sides of the fence. If you're looking to make it a little more personalized to fit your style, you can also add a lattice top or wood accents on the top and/or bottom of your steel fence panels. **Make it your own!**

DURABLE.

For a fence investment to make any sense, it must stand the test of time. ColorMax steel won't rot and it won't be eaten by termites.

It's non-combustible and resists the progress of fire. So you can be sure ColorMax steel will enhance the privacy and security of your home for years to come.

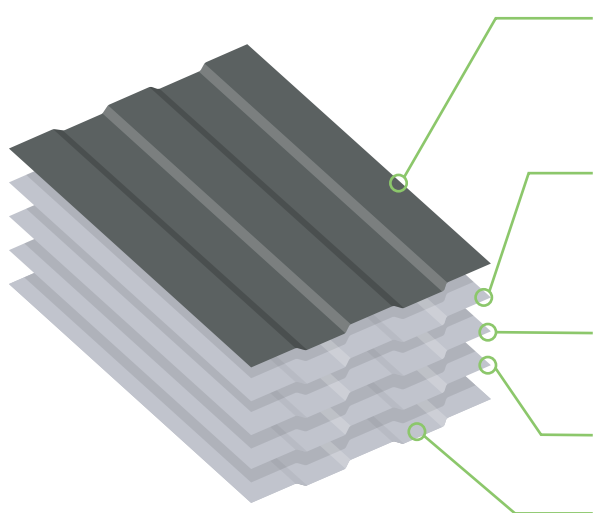

It's also backed by a warranty directly from our manufacturer. So your decision to choose ColorMax steel will give you peace of mind that you've chosen a quality material that'll last.

...IT'S ALL ABOUT HOW IT'S MADE!

Tested in the harshest Australian conditions over the last 50 years, your ColorMax steel fence is far more than just 'paint on steel.'

The structural steel core base is made to meet the Australian Standard AS 1397, ensuring strict adherence to the highest quality grade and finish of your steel.

The steel base of the fencing panels are coated with Active technology, BlueScope's industry-leading metallic coating that enhances anti-corrosion performance.

A thin pre-treatment layer is applied to enhance the adhesion of further coatings.

A polyester primer is baked onto the surface.

A topcoat of specially developed exterior grade lead-free paint is baked on for enhanced resistance to chipping, peeling, and cracking -- and to ensure the finish retains its look for longer.

FIRE RESISTANT.

Wherever you live, fire resistance and resilience are increasingly important.

Of all the materials tested, on different types of fencing, in a brushfire testing project conducted by the CSIRO, ColorMax steel performed the best under all exposure conditions, including testing used to simulate the potential effects of an adjacent house fire.

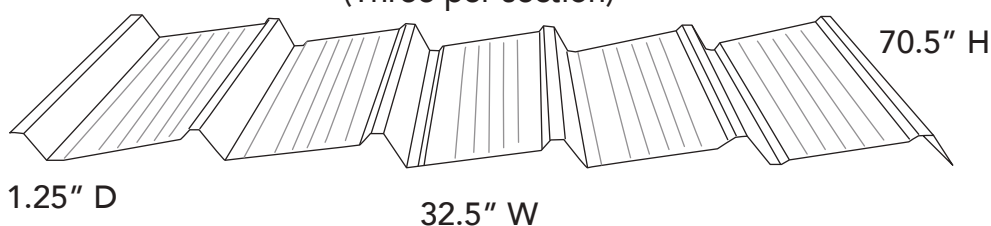

BETTER PRIVACY & SAFETY.

Say goodbye to that gap in the fence that the neighbors can see through. When installed, ColorMax steel fencing has smooth surfaces and close-fitting panels without any gaps, visible footholds, or loose panels. This helps keep your home private and secure so you can be more confident your kids and pets are where they should be -- within the safe boundary of your fence.
